

Premier League

Top Players from 2022–2023

Introduction

With the 2022–23 season concluded, we can fully analyze season statistics to find which players excelled in the past year.

Metrics Analyzed for Each Position

Player form and success are measured differently across different positions. These are the metrics that were used to rank players in each positional subset.

Michael Olise

Team: Crystal Palace

Age: 22

Country: France

Market Value (\$m): \$39.90

Assists: 11

x_Assists: 8.7

Drawbacks of the Data

Intangible Attributes

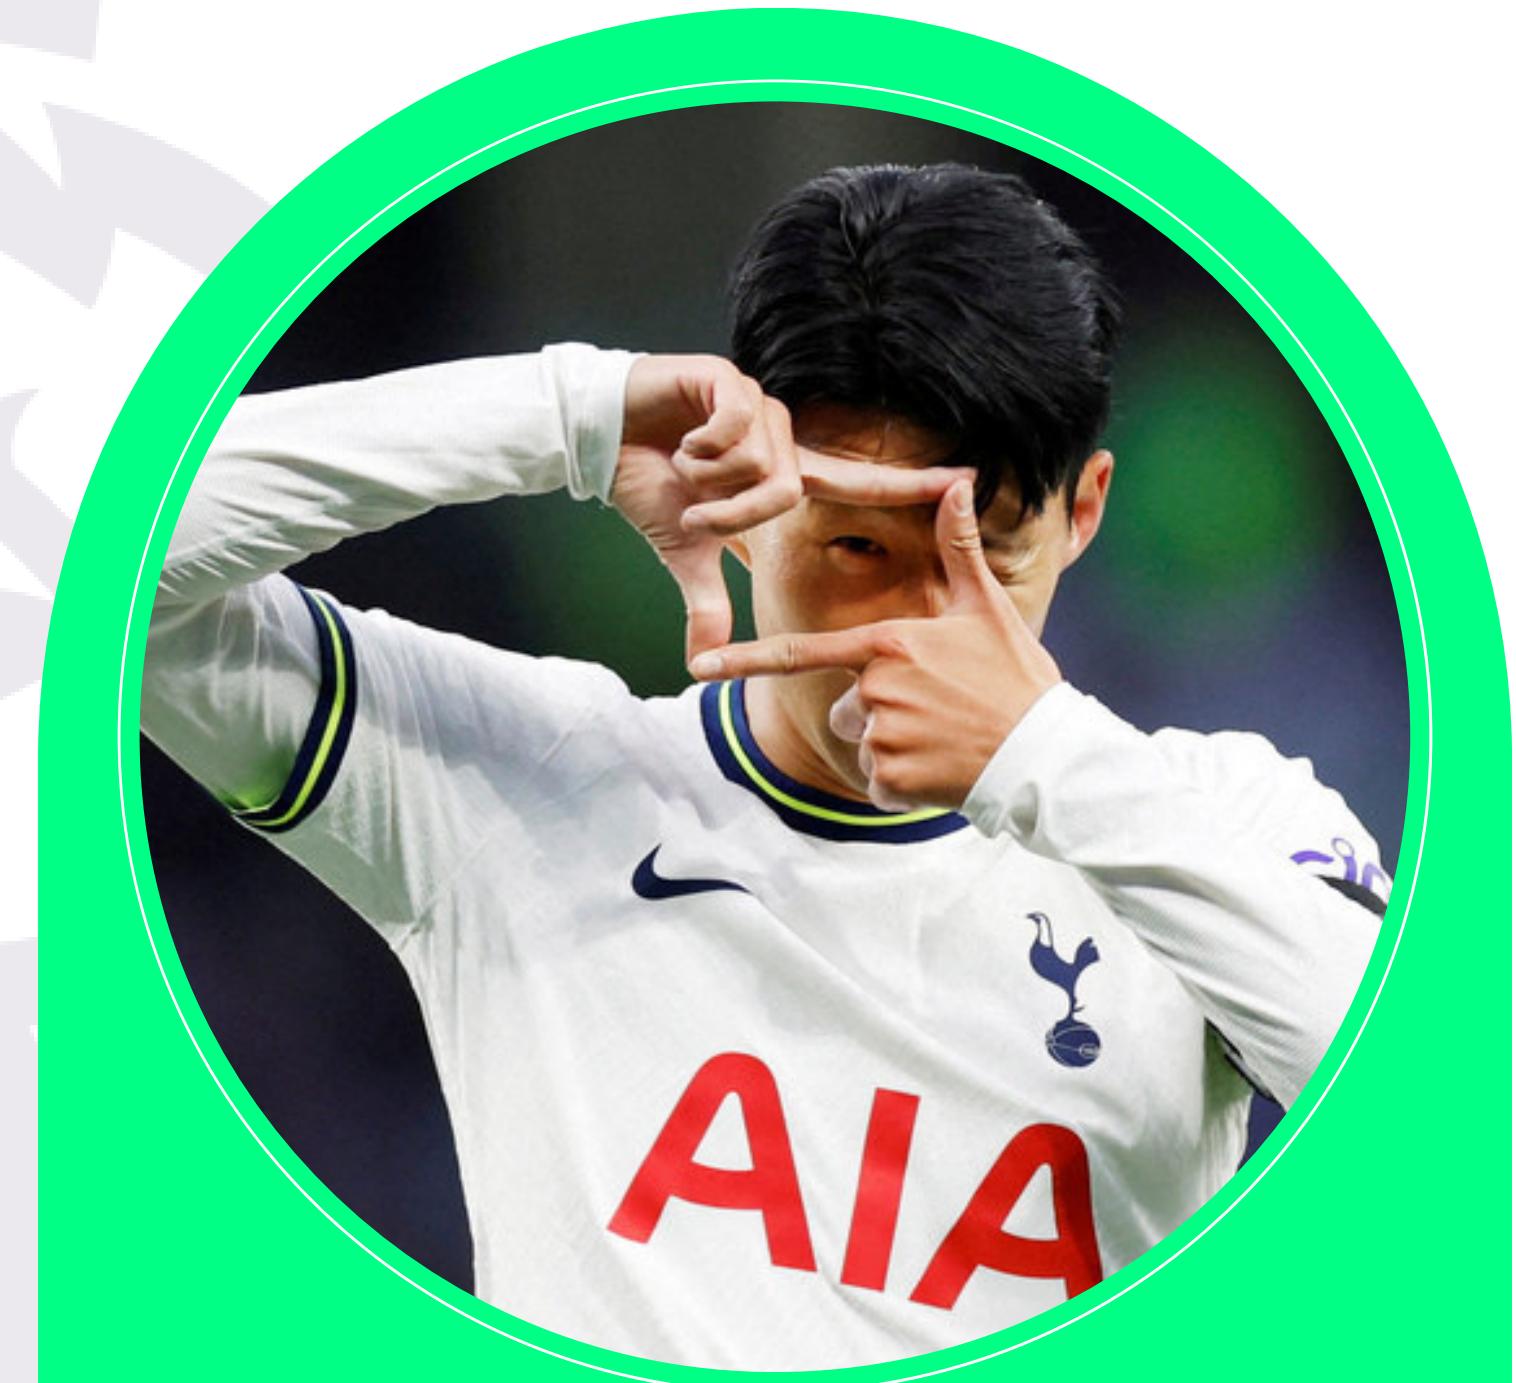

There is no way to quantify attributes like leadership, decision-making, football IQ, etc. - all attributes that are important for professional players

Player/Tactical Styles

Each player has a different playing style that suits a distinct tactical setup. A player's individual role can drastically affect their statistics when compared to other players

Team vs. Player Success

It is difficult to combine a player's stats and apply weights to them based on their team's performance in the league

Who Can Use this Data?

Managers & Coaches

Managers and their coaching staff can analyze their upcoming opponents to adapt their game plans to cope with especially dangerous players

Scouting Teams

Using market values as the focal point of their analysis, scouts can recommend acquiring players that have a low market value with comparatively high numbers

Aspiring Professionals

Youth players can find the top players in their position and adapt their playing style to impress senior team managers

THANK YOU
